Breast Pumps and Accessories

Description

A breast pump is a suction device used for withdrawing milk from the breast of a lactating mother for infant feeding when the mother cannot be present at feeding time or when the infant is too sick or weak to suck.

There are three types of pumps available: manual, electric and heavy-duty hospital grade.

a) Manual pumps are operated by the individual using their hands. Many manual breast pumps use a system of two cylinders to create suction. Once the breast-shield is placed over the nipple and areola, a small cylinder-shaped tube is pumped in and out of a larger cylinder to create a vacuum that expresses milk and collects it in an attached container.

b) Battery powered and standard electric pumps are powered by either AC or DC current.

c) Heavy duty hospital grade pumps are electric powered, piston operated, and provide vacuum suction/release cycles with a vacuum regulator.

Policy

For members covered under plans subject to the Patient Protection and Affordable Care Act (PPACA) for coverage of breast pumps, the following are covered when obtained via an in-network provider:

- Standard electric breast pump (non-hospital grade)
  - Coverage is limited to the purchase no more frequently than once per birth.

- Breast pump supplies, including:
  - tubing for breast pump
  - adapter for breast pump
  - cap for breast pump bottle
  - breast shield and splash protector for use with breast pump
  - polycarbonate bottle for use with breast pump
  - locking ring for breast pump

The rental or purchase of a **standard** electric breast pump for plans **not** subject to Patient Protection and Affordable Care Act (PPACA) may be covered when one or more of the following conditions exist:
• The infant is unable to initiate breastfeeding due to a medical condition such as oral defect, cardiac/pulmonary anomalies, etc.
• For multiples or twins until breast feeding at the breast is established consistently
• For premature babies born at 35-36 weeks of gestation when the infant continues to experience difficulty coordinating suck and swallow and the mother is pumping breast milk awaiting the baby’s ability to nurse directly from the breast
• For premature babies born at 24-34 weeks of gestation and the mother is pumping breast milk awaiting the baby’s ability to nurse directly from the breast
• When the mother has an anatomical breast problem such as inverted nipples or mastitis which may resolve with the use of a breast pump
• When the infant has poor weight gain and pumping breast milk is an intervention in the pediatrician’s plan of care
• For any infant who is temporarily unable to nurse directly from the breast such as a baby in NICU or during any hospitalization of the mother or baby that interrupts the ability to nurse
• For mother/infant separation
• When the mother is required to take a medication or undergo a diagnostic test that is contraindicated with breastfeeding

**Policy Guidelines**

**Coverage Criteria:**

Documentation must be less than 30 days old and include:

- Diagnosis/medical condition of the infant relating to the need for a breast pump.
- Infants age (gestational age, if premature)
- Mother’s discharge date
- Anticipated duration of need.

Associated supplies needed for the operation of the breast pump are included in the rental.

**Limitation:**

Manual breast pumps are not considered durable medical equipment and are not eligible for coverage.

Hospital grade electric breast pumps for use in the home are not considered reasonable and necessary because they are considered institutional equipment and not appropriate for use in the home.
**HCPCS Level II Codes and Description**

**Important Note:**

Northwood’s Medical Policies are developed to assist Northwood in administering plan benefits and determining whether a particular DMEPOS product or service is reasonable and necessary. Equipment that is used primarily and customarily for a non-medical purpose is not considered durable medical equipment.

Coverage determinations are made on a case-by-case basis and are subject to all of the terms, conditions, limitations, and exclusions of the member’s contract including medical necessity requirements.

The conclusion that a DMEPOS product or service is reasonable and necessary does not constitute coverage. The member’s contract defines which DMEPOS product or service is covered, excluded or limited. The policies provide for clearly written, reasonable and current criteria that have been approved by Northwood’s Medical Director.

The clinical criteria and medical policies provide guidelines for determining the medical necessity for specific DMEPOS products or services. In all cases, final benefit determinations are based on the applicable contract language. To the extent there are any conflicts between medical policy guidelines and applicable contract language, the contract language prevails. Medical policy is not intended to override the policy that defines the member’s benefits, nor is it intended to dictate to providers how to direct care. Northwood Medical policies shall not be interpreted to limit the benefits afforded to Medicare or Medicaid members by law and regulation and Northwood will use the applicable state requirements to determine required quantity limit guidelines.

Northwood’s policies do not constitute medical advice. Northwood does not provide or recommend treatment to members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.
